

1 ABSTRACT

2           An integrated, monopole reinforcement sleeve system for the reinforcement of  
3 self-supporting monopoles at select, predetermined locations. The integrated, monopole  
4 reinforcement sleeve system is composed of at least one pair of complementary hemi-  
5 sleeves and a non-slip filler, wherein the filler is inserted between the sleeves and the  
6 monopole. The sleeves are tightened around the monopole, thereby providing integrated  
7 monopole reinforcement. A method for the reinforcement of monopoles with an  
8 integrated reinforcement sleeve is also described.
